Game Rules

The objective of the player is to achieve a higher score than the dealer.

Upon pressing the 'Deal' button 2 cards are dealt to the player and 1 card to the dealer.

Players automatically stand if achieving a total of 21.

Players can stand (remain on current total) or hit (take additional card) on any total of less than 21.

If the player's hand exceeds a total of 21 they have busted and lose their bet.

Dealer must draw to 16 and must stand on 17 or higher, including soft hands.

Dealer only draws cards if at least one player hand remains active.

If the dealer's hand exceeds a total of 21 they have busted and all remaining player hands win.

If the dealer achieves a total of 17 or more and is equal to the player's hand a 'standoff' (draw) results.

The game uses 6 decks. Decks are reshuffled at the completion of the betting round.

Aces count as 1 or 11. All picture cards have a value of 10. All other cards have face value.

First 2 cards only totaling 21 is a Blackjack (any 10 card + Ace).

Blackjack pays 3:2.

If the first 2 cards dealt to the player are of the same value they may be split.

A split stakes a bet equal to the original bet on each hand.

Split hands are played separately, with each hand resolved in turn after one card is delivered to each hand.

Hands may only be split once

Splits resulting in an eligible double score may be doubled.

If you split Aces, only one card is dealt to each Ace. If a ten-point card is dealt to either Ace, the hand is treated as a 21, not Blackjack.

If the first 2 cards dealt to the player total 9, 10 or 11 they may be doubled.

Split hands in which the first 2 cards total 9, 10 or 11 may also be doubled.

A double stakes twice the original bet on that hand.

Only one additional card is dealt to a doubled hand.

Dealer's Blackjack takes all bets other than a player's Blackjack, which is a standoff.

Players can place up to half of their original bet as Insurance if the dealer's first card is an Ace.

If the dealer achieves a Blackjack Insurance pays 2:1.

If the dealer does not achieve a Blackjack all Insurance bets lose.

Malfunction voids all pays and plays.

After you choose a color by clicking on one of the colored boxes located on the sides of the box with the reels, the reels will spin and if your guess is right you will receive double the amount of your current win. If you do not guess the right color, you lose your current win. A third possibility is that the star is golden, in which case you do not win double or lose your current win, and you can choose to **Collect** it or **Gamble** it again by guessing the color of the next star in the reels. The same rules described above will apply again.

Winning Combinations

The winning symbols must appear consecutively one after another in a given win line for the win to be granted. All wins are paid from left to right except for Scatters, which pay in any order of appearance. Only the highest win in a win line is paid. The Payout is calculated by multiplying your bet per line by the winning combinations obtained in the spin. The amount you win will be added to your total credits account by pressing the Collect button, or automatically if you are playing on Autoplay mode. You can also choose to Gamble your wins after every spin.

The winning combinations are listed below. 'Bet' in this payout table refers to the amount you bet per line. 'Total Bet' refers to the total amount you bet in a spin.

Free Spins will use the same bet per line and lines values used in the spin that triggered this feature. The Payouts are calculated by adding up all your wins during Free Spins and applying the corresponding multiplier. You can choose to Gamble your total wins after you have used up your awarded free spins. Free Spins do not award more free spins.

61. European Blackjack

Help

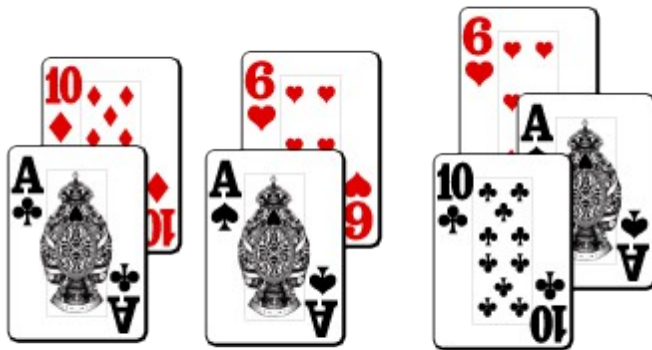

Game Rules

In **Blackjack**, the objective is to accumulate cards whose total sum is as close as possible to 21 but without going over 21. To win, you need to beat the dealer without busting. You bust when your cards total more than 21, in which case you lose automatically. The winner is whoever's cards total is closest to 21. You may request more cards than the original two dealt to you and you may stand at any time.

Face cards (Jacks, Queens and Kings) are worth 10 points. Aces are worth 1 or 11, whichever is preferable. All other cards have their nominal value. Either six or eight decks of cards are used and shuffled together by the dealer and placed in a card dispensing box called 'Shoe'. Before receiving any cards, players must place a wager, then they are dealt two face-up cards. The dealer also gets two cards: one face-up and one face-down. The player, in turn, either stands or asks to be 'hit' with more cards to try and get closer to 21 without busting. If the player does not bust and stands, the dealer turns up the face-down card.

As a rule in this game, the dealer must stand on all counts of 17 or higher, on counts of 16 or lower the dealer must draw. All hands dealt at the Blackjack table can be classified as either a hard or a soft hand. A **Hard Hand** is a hand without an Ace, or with an Ace valued at 1. It is said to be 'Hard' because the Ace can only be given one value, as opposed to a Soft Hand. A **Soft Hand** is a hand that contains an Ace valued as 11.

If the Player and the House tie, it is a push and no one wins. If the Player gets 21 in the first two cards that are dealt (an Ace and a 10 or a face), this is called 'Blackjack' and it is an automatic win for the Player. If you have Blackjack, you will win 1.5 times your bet unless the dealer also has Blackjack, in which case it is a Push or a Tie (or a Stand-off) and you get your wager back. Players with a lower count than that of the dealer's, lose their bet. If the dealer busts, the player wins.

How to Play

1. Select your **Wager** by clicking on the - and + symbols under the **Wager** box.
2. Place your **Bet** by clicking on the spot on the table in the game window destined for this. You can click several times on it to raise your bet or use the **Clear Bet** button to clear your current bet and start over.
3. Click on **Deal** to start playing. Two cards will be dealt to you and two will be dealt to the dealer, one of which will be facing down. Based on those cards, you can choose to **Stand** and move on to the showdown with the count you currently have on your cards, or **Hit** to request another card. Labels indicating the current cards count will appear next to your and the dealer's cards.

4. If you win, the amount you earned will be displayed in the **Win** box. If the Dealer busts, a label will be displayed indicating this.
5. To play again with the same **Wager** as in the previous round, click on the **Deal** button, or use the **Clear Bet** button and change your wager values following the steps in this section from the beginning.

Other Bets

There are other betting options namely **Insurance**, **Double Down**, and **Split Hand**.

- **Insurance:** Side bet for up to half the initial bet against the dealer having a natural 21. The insurance bet is allowed only when the dealer's face-up card is an Ace. If the dealer's face-down card is a 10 and makes a Blackjack, insurance pays at 2:1 odds, but if it is not, you lose your insurance stake.
- **Double Down:** Double your initial bet following the initial two-card deal, but you can hit one card only. It is a good bet if the player is in a strong situation.
- **Split Hand:** Split the initial two-card hand into two and play them separately. This is allowed only when the two first cards are of equal value. Use each card as the start to a separate hand and place a second bet equal to the first one.

Insurance Rules

- You can take Insurance only if the Dealer's first card is an Ace.
- The Insurance bet is equal to half of your original bet amount.
- Insurance bet wins or loses are independent of your original bet.
- Insurance is only taken on your original hand. You cannot take Insurance after a Hit, Split, or a Double Down bet. This means you can only take Insurance when the Dealer has one card face-up and only the first two cards have been dealt to you.
- If the Dealer does not have a Blackjack, the Insurance bet is removed from the table, and the cost of the Insurance bet is deducted from your credit balance. The hand continues.
- If the Dealer has Blackjack, the Insurance bet is paid out at odds of 2:1.

Double Down Rules

- You can Double Down when your initial hand has a value of 9, 10 or 11. If you choose this option, you are dealt one card and your hand automatically Stands.
- The Double Down bet is equal to your original bet.
- You cannot Double Down after a Split and you can only Double Down once per hand only.

Splitting Rules

- You can only Split two cards that have the same denomination, such as two Queens or two Fours. If you choose this option, your hand is divided into two separate hands and a bet equal to your original bet is placed on the second hand.
- Cards of the same value but not the same denomination cannot be Split in European Blackjack. For example, a King and a Ten have the same numerical value, but cannot be split because the cards do not have the same denomination.
- Aces can be split in European Blackjack.
- If you split a pair of Aces and then draw a card with a denomination of 10, this is not considered as Blackjack, although it has a value of 21.
- You can Split a maximum of once per hand. This equals two hands.

62. European Roulette

Help

Game Rules

Roulette is a popular casino game in which you play against the House represented by the croupier (also called the dealer) who spins the roulette wheel and handles the bets and payouts. In the European roulette version, the wheel has 37 slots representing 36 numbers and one zero. In the American version, most roulette wheels have two sets of zeros, therefore 38 slots.

To win at Roulette you need to predict where the ball will land after each spin. You must place your bet or bets on numbers (any number including the zero) or on the outside categories on the table layout. Some players bet on many numbers to increase their chances of winning at every spin, but this way the payout is considerably reduced.

After you have placed your bets, the croupier spins the roulette wheel and launches the ball. When the ball drops on a slot, the winning is determined by those bets that are on or around the number that comes up. Also the bets on the outside of the layout win if the winning number is represented in any of those categories.

You have the option to bet on:

- A certain number
- A combination of numbers
- Categories like whether the number will be red or black, or even or odd.

How to Play

1. Select your **Bet** size by clicking on the arrows next to the chips in the game window.
2. Place your **Bet** by clicking on the places on the table layout in the game window corresponding to the numbers or categories you would like to bet on. You can click several times on one same spot to raise your bet or use the **Clear** button to clear your choice and start over.
3. Click on **Spin** to start playing. The roulette wheel will spin and the number it lands on will be shown in the close up box in the upper corner of the game window. If you win, the amount you earned will be displayed in the **Win** box.
4. To play again with the same **Bet** and bet placement as in the previous round, click on the **Rebet** button, or click on new places to place new bets. Wild Symbol

The **Golden Seven** is the **Wild symbol** and can substitute for any other symbol in the game, except the Scatter symbol, to help complete winning combinations. If the **Wild symbol** appears in more than one win line at a time, it substitutes for symbols on each win line separately and

You will have to choose one of the stars by clicking on it for the hidden symbol to be revealed. At that moment, all the stars that triggered the feature will transform into that symbol and burn into flames. Your bonus win is the payout for that symbol combination and will be added to your wins in that spin.

Gamble Feature

After every win, if you have not reached your gamble limit, you will be presented with the **Gamble** button in the game window. You can choose to **Collect** your wins or **Gamble** them to double the amount. This feature is not available in **Autoplay** mode, which collects your wins automatically.

After you choose a color by clicking on one of the colored boxes located on the sides of the box with the reels, the reels will spin and if your guess is right you will receive double the amount of your current win. If you do not guess the right color, you lose your current win. A third possibility is that the star is golden, in which case you do not win double or lose your current win, and you can choose to **Collect** it or **Gamble** it again by guessing the color of the next star in the reels. The same rules described above will apply again.

All wins are paid left to right, except for the **Bonus symbols** which in this game pay in any order of appearance. Only the highest win in a win line is paid. The **Payout** is calculated by multiplying your bet by the winning combinations obtained in the spin. The amount you win will be added to your total credits account by pressing the **Collect** button, or automatically if you are playing on **Autoplay** mode.

The winning combinations are listed below:

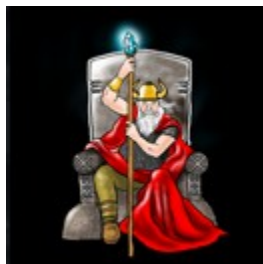

Symbol	5x	4x	3x

Special winning combinations are also paid: If three or more **Skulls** appear on a win line and one is **Golden**, the win is doubled. If one or more is a **Crystal** skull, the win triples. And if there are both **Golden** and **Crystal** skulls in the winning combination, the two multipliers are combined and your win is multiplied 6x times.

Wild Symbol

When the game is triggered, you will have to choose one of the two Dragons. Your Dragon will fight the Dragon you did not choose and if it wins, you receive a **Bonus prize** with an extra multiplier of 3x or 4x. If your Dragon does not win, you receive a **Bonus prize** without an extra multiplier.

Gamble Feature

After every win, if you have not reached your gamble limit, you will be presented with the **Gamble** button in the game window. You can choose to **Collect** your wins or **Gamble** them to double the amount. This feature is not available in **Autoplay** mode, which collects your wins automatically.

When you get 2 or more **Wild** symbols on a win line, they will pay according to the payout table, except for cases in which the Wild symbols complete a winning combination in that win line that pays higher than the Wild symbols combination alone. In that case, only the highest win will be paid.

Free Spins

The **Zeus** symbol is a **Scatter** symbol. When you get 2 **Scatter** symbols on the reels, you earn double your total bet. If you get 3, 4, or 5 **Scatter** symbols on the reels, your total bet is multiplied according to the **Payout** table and you are awarded **Free Spins** with a 3x multiplier. **Free Spins** can also award you more free spins. **Free Spins** come in bundles of 10.

Free Spins will use the same bet per line and lines values used in the spin that triggered this feature. The **Payouts** are calculated by adding up all your wins during **Free Spins**.

Bonus Game

The **Colossus** symbol is the **Bonus** symbol. When you get 3 or more **Bonus** symbols consecutively on an active win line, the **Bonus Game** is triggered.

During the **Bonus Game** you will have to select 3 ships from 12 available to reveal your win. After selecting your 3 ships, you will be able to see the win hidden in all the other symbols. The wins from the **Bonus Game** are calculated by adding the values revealed in your chosen ships. **Bonus** wins are added to other win line wins.
